

Later variety with immature cobs

- Very late maturity
- Immature cobs
- Good standing ability

Ratings

Cover Crop

Late Shot is selected for very late maturity and good standing ability.

It produces an immature cob that only develops to the 'bright white' stage under normal UK autumn and winter conditions.

Due to the late cob formation it tends to be of less interest to rats and badgers that can decimate more mature cobbed varieties through the shooting season.

Seed Rate

111,150 to 123,500 seeds/ha

Pack Size

50,000 seeds
